                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Submitted (JUL-2001) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: CAN HYDROLYZE THE GAMMA-GLUTAMYL MOIETY OF GLUTAMYL AS WELL AS CONVERT LEUKOTRIENE C4 TO LEUKOTRIENE D4.
-!- CATALYTIC ACTIVITY: (5-1-91Ltamy1)-peptide + an amino ac: peptide + 5-L-91Ltamy1-amino acid.
-!- SUBUNIT: THIS ENZYME CONSISTS OF TWO POLYPEPTIDE CHAINS, SYNTHESIZED IN PRECURSOR FORM FROM A SINGLE POLYPEPTIDE SIMILARITY).
-!- SUBCELLULAR LOCATION: Type II membrane protein (Probable)-
-!- SUBCELLULAR LOCATION: Type II membrane protein (Probable)-
-!- SIMILARITY: STRONG, TO OTHER GGT ENZYMES AND TO GL-7ACA /-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             15-JUN-2002 (Rel. 41, Last annotation update) Gamma-glutamyltranspeptidase 5 precursor (EC glutamyltransferase 5) (GGT-Rel).

"Molecular phylogeny and evolution of marsupial protamine P1 genes.",
Proc. R. Soc. Lond., B, Biol. Sci. 259:7-14(1995).
-1- FUNCTION: PROTAMINES SUBSTITUTE FOR HISTONES IN THE CHROMATIN OF
SPERM DURING THE HAPLOID PHASE OF SPERMATOGENESIS. THEY COMPACT
SPERM DNA INTO A HIGHLY CONDENSED, STABLE AND INACTIVE COMPLEX.
-1- SUBCELLULAR LOCATION: Nuclear.
-1- TISSUE SPECIFICITY: TESTIS.
-1- SIMILARITY: BELONGS TO THE PROTAMINE P1 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SPECIES=D.marsupialis;

HOPPE-Seyler's Z. Physiol. Chem. 360:1595-1604(1979).

1- FUNCTION: Primary component of whey, it binds retinol and is probably involved in the transport of that molecule.

1- SUBURIT: UNDER PHYSIOLOGICAL CONDITIONS BETA-LACTOGLOBULIN EXISTS AS AN EQUILLBRIUM MIXTURE OF MONOMERIC AND DIMERIC FORMS.

1- SUBCELLULAR LOCATION: Secreted.
                                                                                                                                                                                                                                           MEDLINE=95213451; PubMed=7699130;

ROSYNTHESIS OF A DEMOLYBDO COFACTOR

FUNCTION: INVOLVED IN BIOSYNTHESIS OF A DEMOLYBDO COFACTOR

(MOLYBDOPTERIN), NECESSARY FOR MOLYBDOENZYMES. PLAYS A ROLE IN A

ACTIVATION OF THE SMALL SUBUNIT OF THE MOLYBDOPTERIN CONVERTING
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 FACTOR (MOAD).
PATHWAY: Molybdenum cofactor biosynthesis.
SIMILARITY: BELONGS TO THE HESA/MOEB/THIF FAMILY.
